

Anap - National Association of Professional Beekeepers

(Anap for "Association Nationale des Apiculteurs Professionnels" in French)

Organizing itself for professional and profitable beekeeping

Beekeeping in Algeria, a dynamic to be structured

Algerian agriculture benefits from favorable conditions for cereal, livestock, market garden and tree productions, yet, as a result of cereal monocultures, it is heavily affected by climatic hazards and soil depletion. Despite a struggling economy and high unemployment, agricultural sector appears to provide employment in high value-added markets such as market gardening, arboriculture and beekeeping.

In this context, beekeeping in Algeria is endowed with an exceptional dynamism. Beekeepers are strongly marked by an entrepreneurial and pragmatic spirit; that spirit has led to the creation of several kinds of beekeepers' organizations. This level of structuring is an exception compared to the rest of the agricultural sector, even if it has benefited from limited technical and regulatory support. However, the professionalization of beekeeping cannot continue without strengthening these organizations. Networking and good coordination are also important conditions for the internal cohesion of the profession and its communication with the authorities.

Supporting Anap in its sustainability and the development of its services to beekeepers

Improving in a sustainable way **hive products** and access to quality inputs

Enhancing the **value** of hive products on remunerative markets

Developing and making sustainable **a range of services adapted** to the needs of beekeepers and their territories

ALGERIA

- Anap zone of action
- Capital

1
national FO 

560
beekeepers have access to Anap's services

Beekeepers families benefit from the action; a total of **2 800** persons

Actions

From genetic selection to marketing: mastering all the links in the beekeeping chain

Anap has defined for the next 5 years ambitions that will structure its work for the benefit of its members and Algerian beekeeping:

- **Improvement of bee genetics:** to safeguard and promote the local bee breeds Tellian and Saharan (fertilization stations, selection scheme, artificial insemination, production of queens...).
- **Improvement of livestock health:** better management of livestock health (varroa mite health monitoring network, quality of inputs, etc.)
- **Improvement of beekeepers' technical skills** from production to marketing (guide to good beekeeping practices, training, etc.).
- **Promotion of quality and better marketing conditions** for hive products (quality, recognition, label, market integration...)
- **Representation of professional beekeepers** to their public and private interlocutors.

In order to enable Anap to transform its ambitions into efficient and viable services, the association is going to be supported on the development and good management of its activities, on the evolution of its associative life and the reinforcement of the skills of its technical and administrative team.

News

A strategic general meeting

ASSOCIATIVE LIFE

Anap is preparing its 2018 elective general assembly. Scheduled for the end of the year, its main objective is the renewal of the authorities (members of the national office) and is preceded by three preparatory regional assemblies (East, West and Central Algeria).

Two years after the creation of the association, the GA is also an opportunity for the president to present Anap's new ambitions. Reinforced by various technical and organizational activities implemented with its partners, Anap is structuring itself to strengthen its role and its representativeness in the beekeeping sector in line with its national ambition.

Budget

110 000€

Average annual budget
(including Fert and Area-ed support)

In a long term,

15 000

beekeepers from Algeria benefit
from the effort of structuring
efforts of Anap
